Customer #: 39086

Proposal #: 113317

Take Down

Take down and remove the structurally unsound 50" diameter ailanthus and 12" diameter Norway maple in the patio area behind your house, leaving low stumps.

Julian

NOTE: We will need to block off the section of alley #415.

6 parking spaces will need to be clear on the other side of the alley associated with #339 Marlborough Street.

The 2 parking spaces on either side of the tress must be clear of vehicles on the day of the job.

(Neighbor's permission is required so we can use their parking spaces for access to this work.)

NOTE: These two trees had significant storm damage over the winter and are structurally unsound. There is no way for these trees to sustain themselves in a manner that would pose a limited amount of risk to buildings, vehicles, and people. I would expect failure of these trees to not only continue over time, but to continue at an accelerated rate over time. Therefore, it is recommend by our Certified Arborist to remove both trees.

Please complete and return the enclosed Neighbor Permission.
