Boston, Ma

Dear Nancy pursuant to your request I had a chance to look at your 14" Golden Chain tree (laburnum) located in the front yard.

The tree is suffering from anthracnose a leaf disease, and fusarium canker most probably caused by winter damage causing cankers on trunk and branches. There is more than 50 percent dead and dying branches in the tree. I would recommend removal of this tree.

Best Regards

Joseph Nardelli MCA 1761
