Subject: (Revised) Request to Amend and Extend Existing Order of Conditions for the Muddy River Flood Damage Reduction Project, Phase 2 (DEP File #006-1635)

Dear Mr. Moreno:

On behalf of the Boston Parks and Recreation Department (BPRD), CDM Smith Inc. (CDM Smith) is pleased to submit this revised Request to Amend and Extend the existing Order of Conditions (OOC) for the Muddy River Flood Damage Reduction Project, Phase 2 (the Muddy River Project), an Ecological Restoration Limited Project (DEP File #006-1635). The Project was designed by the U.S. Army Corps of Engineers-New England District (ACOE) and aims to relieve the Muddy River of flooding, improve degraded riverine habitats, poor water quality, and other related water resource problems. This request seeks approval for additional invasive species removal and ecological restoration in an added project area, referred to as Work Area 12A. (See Project Locus Drawing attached.)

The proposed additional Work Area 12A will significantly complement the work already underway in Phase 2 and will serve the overall project goal for restoration of the Muddy River. It is important to note that this work was originally part of the overall Muddy River Restoration work but was omitted due to Federal Funding in the early 2000. The BPRD desires to seek this opportunity (in securing the Contractor's services while on-site) to achieve this important additional ecological restoration with significant benefit toward the overall goal of the Muddy River Flood Reduction and Ecological Restoration Project.

This request is also seeking a 3-year extension to the existing OOC to allow for completion of the work inclusive of the warrantee periods.

Update for Phase 2

The design and implementation of the Muddy River Project was conducted in two separate phases. This request only pertains to Phase 2.

Phase 2 construction, currently underway, began in the Spring of 2020, is anticipated to be completed by late 2023, and continues to include the following work:

- Excavation in the river in the Back Bay Fens area to allow for increased flows and reduce flood damage.
- Excavation in five stretches of the Riverway section of the river to allow for increased flows and reduce flood damage.
- Excavation of the sandbar and island at Leverett Pond to allow for increased flows and reduce flood damage.
- Excavation for deepened channel sections to delay need for maintenance dredging.
- Flood proofing at the Boston Fire Department Fire Control Center in the Back Bay Fens.
- Management of invasives (*Phragmites*) in the Back Bay Fens and Riverway areas where necessary to achieve and maintain flood damage reduction and improve ecological habitat quality.
- Restoration of wetland vegetation in dredged areas by seeding or planting appropriate wet meadow and emergent wetland plants.
- Restoration of riparian vegetation in upland areas where *Phragmites* or Japanese knotweed are being eradicated by planting grass, trees, and shrubs.
- Installation of habitat logs for fish and turtles.
- Planned removal of the temporary flow restriction control structure (FRCS) upstream of the Riverway.
- Restoration of vegetation and other landscape features following removal of temporary access roads, staging areas, and the eventually the flow restriction structure.
- Post construction vegetation monitoring and invasive species control.

All of the work in Phase 1 (completed in 2016 under a prior OOC) and in Phase 2 was designed to further the interests of the Wetlands Protection Act (WPA) by restoring and improving the natural capacity of the Muddy River wetlands resource areas in accordance with the goals of an Ecological Restoration Limited Project.

Additional Work Area 12A

Additional Work Area 12A is located in the Fens section of the river, across from original Work Area 12, on the southern bank of the river. The proposed work activities will extend the invasive species removal and restoration plantings from the culmination of Phase 2 Project work at Agassiz Road approximately up to Boylston Street. See attached Drawings CD109 and CD110 - Invasives Removal Plans and C-109 and 110 - Restoration as well as C-109 and C-110 Access Areas, which delineate the work activities in proposed Work Area 12A.

Work Area 12A, includes work in the following wetlands resource areas:

- Bank
- Bordering Vegetated Wetlands (BVW)
- Land Under Water (LUW)

- 25-ft Riverfront Area
- 100-ft Buffer Zone.

Table 1 lists alterations to wetland resource areas as approved by the original OOC, proposed alteration as part of Work Area 12A, total alterations including Work Area 12A, as well as the percentage that Work Area 12A comprise of the total impacts.

Table 1

UPDATED WETLAND RESOURCE AREA ALTERATIONS				
Wetland Resource Area	Original Alteration	Proposed Work Area 12A Alterations	Total Alteration	Percent of Original Alteration
Bank (LF)	5,115	1,606	6,721	31%
Bordering Vegetated Wetland (SF)	72,980	1,494	74,474	2%
Land under Water (SF)	561,307	38,532	599,839	7%
Bordering Land Subject to Flooding (SF)	1,754,306	75,260	1,829,566	4%
Riverfront Area (SF)	358,750	18,112	376,862	5%

The additional activities in Work Area 12A will comply with the approved approach for means and methods as submitted with the original Notice of Intent with respect to the layout of the flood control channel, access, and storage areas, pedestrian and hauling routes, utility investigations and relocations, site restoration, construction sequencing, environmental protection, including measures to protect Blueback herring and sensitive areas within the park system, flood protection, and traffic management.

Proposed Restoration Plantings

As with the original restoration plan, the Work Area 12A restoration plan is designed to rehabilitate the landscape with a plan that is compatible with the habit, form, scale, and context of the historic vegetation and to restore wetland and riparian habitat. Plant species were selected consistent with a species list of historic plantings and plans from the Olmsted Archives (Frederick Law Olmsted National Historic Site) photographs, Boston Parks and Recreation Department records, site conditions, and availability of plant material from local or regional nurseries.

As shown on Drawings C109 and C110 – Restoration Plans, wetland areas will be seeded with New England Wetland Plants “Wetmix” or an approved equal or planted with obligate or facultative

wetland shrubs between elevation (EL) 1.3 and 2.3 feet. All trees and other shrubs will be planted above EL 2.3 feet. Wetland shelves will be planted with plugs to a depth of about EL 0.8 feet. No upland species will be planted below EL 3.3 feet. Planting lists are as proposed in the original Notice of Intent.

Seed mixes for lawn areas will be a mix of typical turf species, primarily fescues and ryegrasses, and tailored for sun and shade areas and dense shade as specified. A seed mix of native wildflowers and grasses will be used for areas planted with trees and shrubs. This mix contains non-invasive species which typically grow less than about three feet tall and includes species used by pollinators and species with aesthetic appeal.

There will be the a two-year guarantee period for all plantings. Performance standards for wetland vegetation will be based on percent cover. Areas between EL 1.3 and 2.3 seeded with a wetland seed mix or wetland shrubs will have > 75 percent cover by native wetland plants after two years. In upland areas one-hundred percent survival of trees and shrubs will be required.

Temporary fencing will be installed to protect emergent plantings from grazing by ducks, geese, and fish (carp) during the plant establishment period. The fencing will be installed along the water-side edge of all emergent plantings. Fencing will be used on the water side of the shelf areas to exclude carp. Fencing will also be installed on the upland side of the emergent plantings to exclude waterfowl. The entire restored area will be fenced to prevent public access during construction and for a variable of time during restoration based on site conditions and consultation with the sponsors. The fencing is required to limit vandalism and unintentional incidental damage by the public to plant material and side slopes. Use of 4-foot-high coated chain link fencing is anticipated (similar to existing).

Post Construction Monitoring of Restoration Plantings

Invasive plant species will be controlled in restored areas during the 2-year establishment and monitoring period. Over the long term an Operation and Maintenance Manual will discuss invasive species management. Because *Phragmites* can readily spread by seed and will remain in the Riverway and Back Bay Fens proximal to the project area, annual monitoring and control efforts are still required. USACE continues to recommend zero tolerance for *Phragmites* in all restored areas to ensure the ecological and flood conveyance benefits are maintained.

An invasive plant species control plan will be developed and incorporated into the existing plan. The plan relies on frequent meander surveys through restored areas to detect invasive species and the controlled use of herbicide when hand pulling is not an effective control method. All herbicide use will be in accordance with label instructions, state and federal law, and the Order of Conditions received from the Boston and Brookline Conservation Commissions. Herbicides will be applied by Massachusetts certified herbicide applicators.

Page 5

The proposed invasive species removal and restoration plantings in Work Area 12A will result in additional improved habitat value in the Fens section of the Muddy River. In addition, removal of Phragmites also furthers the desired ecological restoration benefits for the Fens section of the Muddy River beyond what the original scope of work achieved.

Climate Change Considerations

The Muddy River Restoration is part of the Resilient Boston and Climate Ready Boston planning initiative and Phase 1 and 2 to date have achieved significant dredging of sediment, invasive plant species removals, construction of new riverbanks and native landscape plantings. Phase 1 also daylighted a large section of the river removing the underground culverts and returning that section to its original state. Further, Phase 2 included the removal of approximately 116 trees (dead or decaying or ashes infested with the Emerald Ash Borer) and plantings of 130 new and more resilient trees. The restoration of Muddy River promotes climate resiliency by reducing impacts from floodwaters, improving water quality, and enhancing aquatic/riparian habitat which will minimize erosion and sedimentation.

We respectfully request that the Commission approve this Request to Amend and Extend the existing OOC (DEP File No. 006-1635). Please do not hesitate to contact me at (617) 452-6586 or via email if you have any questions or concerns.

Sincerely,

Mary C. Mancini, BCEE, P.E.
