Boston Landmarks Commission
RE: 96 Waltham Street, Unit 1
Boston, MA 02118

March 10th, 2023

Dear Commissioners,

This letter is to attest that I have performed an evaluation of the existing windows in Unit 1 at 96 Waltham Street in Boston, MA at the request of the owner, Leslie Pomarole, and that in my professional opinion, all of those under consideration are good candidates for replacement.

There is extant degradation around the openings and the sash themselves are in very poor condition. Most of the original glass has been replaced with flat glass that is extensively scratched. Four windows on the front façade do not have storm windows, causing a significant amount of energy loss through a wide range of gaps and ill-fitting joints.

I have been informed that the proposed replacement windows are JB Sash single-hung Solid Wood true divided-light sash with Double-Pane glass. The installation of these new windows will provide the opportunity to insulate unused weight-pockets and air-seal around the openings. These windows will negate the need for storm windows by increasing energy efficiency and comfort.

In the interest of aligning with aesthetics as well as bringing the home up to modern standards of efficiency and performance, I strongly endorse the installation of new windows for this dwelling.

With regards,

Jeremy Kindall
New England Window Works
